There are well over 220 Doosan service and sales locations operating in Canada and the United States. Moreover, there are more than 90 independent dealers moving lift truck equipment and materials handling equipment. This network permits Doosan Infracore America to aggressively compete in this competitive market. The forklift product line impressively comprises of 63 distinctive versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these numerous truck designs range from 3,000 to 33,000 lbs. All vehicles are built in an ISO 9001 certified facility.

Doosan Infracore America is the fastest emerging forklift and lift truck company in the North American market, due to its exceptional level of product performance and their persistently high level of customer support and service given to all Doosan Infracore Forklift users. The U.S. forklift division based in Cleveland has a expert team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

In the beginning the domestic lift truck marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a home-based equipment expansion project. Product sales of these goods were initially targeted to state-run corporations, large scale organizations, and the armed forces. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training became the new focus for enhancing quality and product development.

Daewoo started the first domestic forklift business in 1967, and rapidly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's superior technological enhancements combined with sales success placed them in a situation of considerable growth of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to respond to competitive pressures in the US materials handling market. This endeavor greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a contemporary plant which helped launch the business for the manufacture of high end added-value products suited for export. In 1993, the company had a international sales system and started exporting models they had developed through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
